

For InternFoxx, I would make the **student dashboard task-oriented**, not a generic social feed. The student should immediately see what to do next, internship progress, applications, and the tools you've planned.

 Resume

	Applications	Interviews	Response Rate
 Cold			
Outreach	24	5	21%
	+4 this week	+2 this week	+6% this week

The hierarchy I'd use

The **most important component should be the 30-day journey**, because that's your differentiator. The dashboard shouldn't just tell the student what has happened. It should answer "**What should I do next?**"

I would also keep **Applications** as a proper table/page rather than trying to cram every application onto the dashboard. The dashboard gets the summary, while the dedicated page gets filtering, status changes, notes, contacts, interview rounds, and so on. Human beings love turning a useful screen into an Excel spreadsheet with 47 columns, so we'll resist that particular tradition.
